5  
6  
7     (036) The invention is a process for forming a preform for use in a structure  
8     having at least one curved portion of a specific length, including the steps of:  
9     1) providing a preform having cable of expanding in length threads in rows  
10    parallel to the direction of curvature over a length equal to the length requiring  
11    curvature, such that the gaps between each thread row are spaced from the  
12    gaps in the adjacent tread rows; and )2 stretching the portions of the preform  
13    requiring curvature in a sine-wave pattern.
